Session: 2026 - 2027 (I Semester)

Under the Supervision of

Mrs. Mahima Tayal (Assistant Professor)

Department of Computer Applications

KIET Deemed To Be University , Delhi - NCR , Ghaziabad-201206

FOODIE – Online Food Ordering and Restaurant Website

Arun Kumar - 2628mca0295

Anshu Kumar - 2628mca0316

Anjali Tyagi - 2628mca0258

Date - September 14 , 2026

Project Overview

- Foodie is a responsive frontend web application designed to provide a simple and convenient food-ordering experience.
- It allows users to explore the restaurant's food menu, select food categories, and access an order-tracking interface.
- The homepage specifically promotes easy ordering directly from the table, allowing customers to scan, choose their food, and place an order without waiting

Main Features:

- Attractive home page
- Easy food ordering interface
- Explore Menu option
- Food category filtering
- Biryani category
- Chinese category

- Desserts category
- Drinks category
- Order tracking
- Order ID input
- Table Number input
- Responsive user interface

Objectives

The main objectives of the Foodie project are:

- To develop a modern and attractive food-ordering website.
- To create a simple and user-friendly interface.
- To allow customers to explore available food items.
- To provide an Order Tracking interface.
- To allow users to enter their Order ID and Table Number.
- To provide clear call-to-action buttons.
- To demonstrate practical implementation of HTML, CSS, and JavaScript.
- To improve the overall digital food-ordering experience.

Measurement of Success

- The project can be considered successful if:
- Users can easily navigate the website.
- Users can access the menu without confusion.
- Food categories are clearly displayed.
- Users can access the order-tracking page.
- Users can enter Order ID and Table Number.
- The interface works properly on different screen sizes.

Scope

The scope of the project is focused on the frontend development of the Foodie restaurant website.

Included in the Project:

Home Page

- Foodie branding
- “Good Food. Good Mood.” heading
- Food-related introduction
- Explore Menu button
- Track Order button

Menu Page

- Pizza
- Burger
- Biryani
- Chinese
- Desserts
- Drinks

Order Tracking Page

- Order ID
- Table Number

Responsive UI (Excluded)

- Production backend
- Permanent database
- Online payment gateway
- Real-time delivery GPS

Methodology

Development Methodology

The website can be developed in the following stages:

Step 1 – Requirement Analysis

Identify the main requirements:

- Food menu
- Food categories
- Ordering interface
- Order tracking
- Responsive design

Step 4 – Testing

Test:

- Navigation
- Buttons
- Menu categories
- Responsive layout
- Order tracking interface
- Input fields

Step 2 – UI Design

Design the layout of:

- Home page
- Menu page
- Food cards
- Buttons
- Tracking page
- Footer

Step 3 – Frontend Development

Develop the interface using:

- HTML5 → CSS3 → JavaScript

Step 5 – Deployment

- | | |
|-------------------------|------------------------|
| • VS Code / Code Editor | Development |
| • Web Browser | Testing |
| • GitHub | Source-code repository |
| • GitHub Pages | Website deployment |

Hardware and Software Requirement

Hardware Requirements

Minimum Hardware:

- Computer/Laptop
- Processor: Dual Core or above
- RAM: 4 GB minimum
- Storage: At least 500 MB free space
- Keyboard and Mouse
- Internet connection for online deployment/testing

For Users:

The website can be accessed using:

- Desktop
- Laptop
- Tablet
- Smartphone

Software Requirements

- Windows / Linux / macOS
- Visual Studio Code or any HTML editor
- Google Chrome / Microsoft Edge / Firefox
- Git
- GitHub account
- GitHub Pages

Technologies

Frontend:

HTML5
CSS3
JavaScript

Database:

Not included in the current
frontend project

Backend:

Not included in the current
frontend project

Hosting:

GitHub Pages

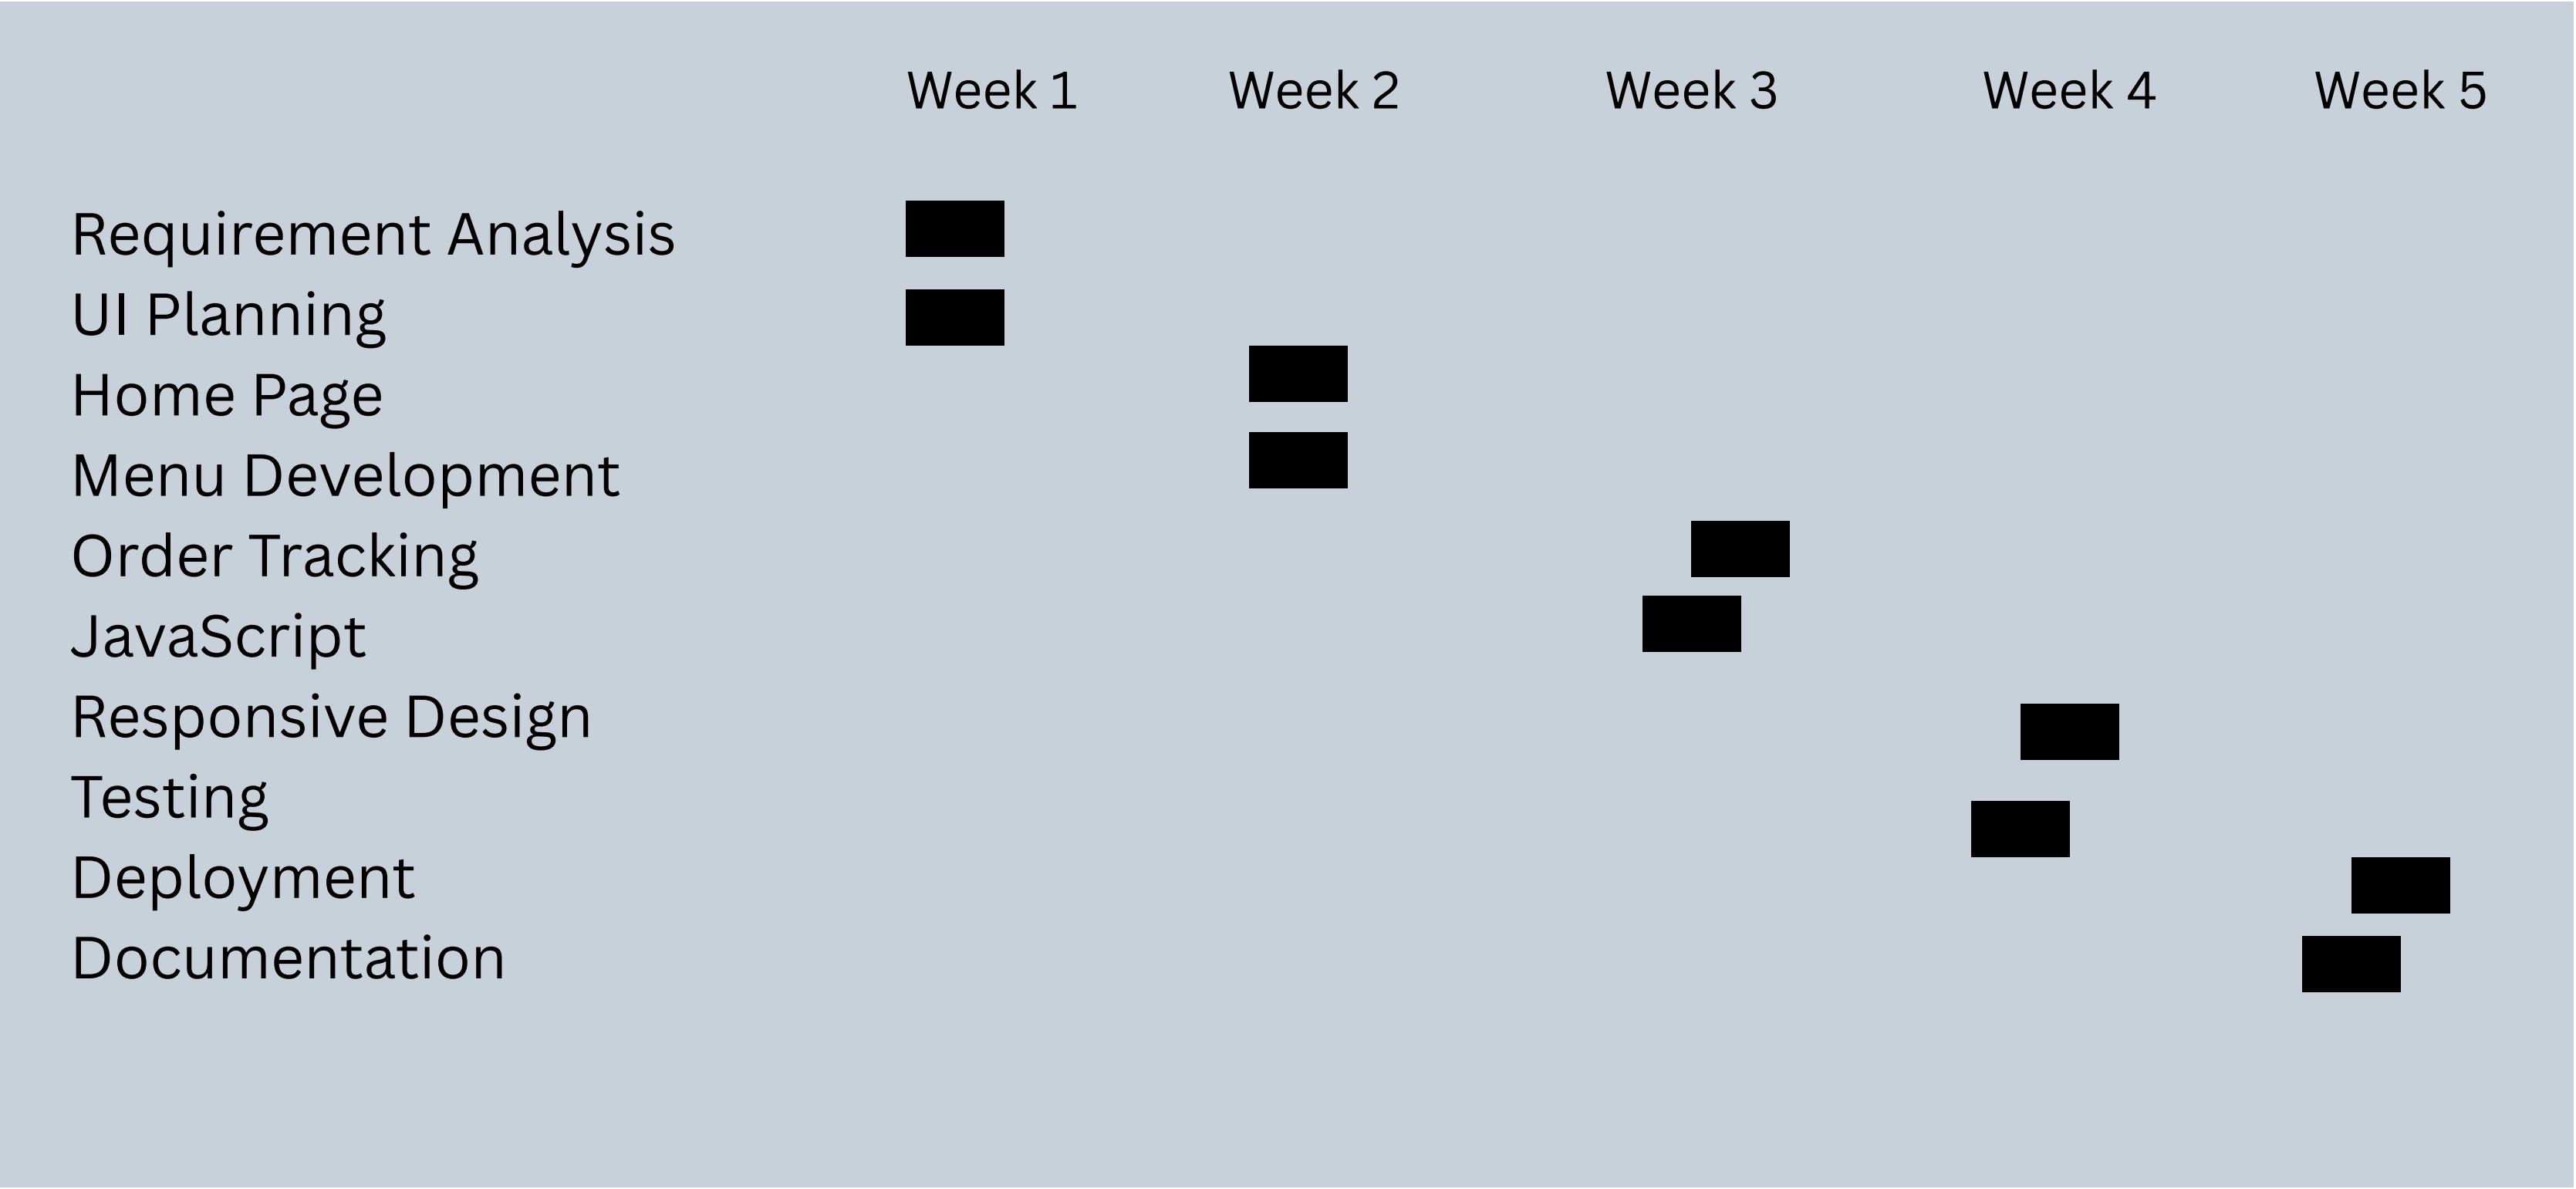

Timeline

A suitable development timeline for the Foodie frontend project is:

Phase	Work	Timeline
Phase 1	Requirement Analysis	Week 1
Phase 2	Website / UI Planning	Week 1
Phase 3	Home Page Development	Week 2
Phase 4	Menu & Food Categories	Week 2
Phase 5	Order Tracking Interface	Week 3
Phase 6	JavaScript Interactions	Week 3

Phase 7	Responsive Design	Week 4
Phase 8	Testing & Bug Fixing	Week 4
Phase 9	GitHub Deployment	Week 5
Phase 10	Final Documentation & Presentation	Week 5

Simple Gantt Representation

Outcomes

- **Web Application Development** – Foodie Online Food Ordering & Order Tracking Website
- **Responsive Frontend Development** using HTML5, CSS3, and JavaScript.
- **Online Food Ordering Interface:** Users can explore food categories, view food items, and interact with ordering features.
- **Order Tracking Interface:** Users can track their order using Order ID and Table Number.
- **Responsive UI/UX:** Website designed for desktop, tablet, and mobile devices.
- **Deployment:** Website successfully deployed online using GitHub Pages.
- **Future Scope:** Integration of backend, database, payment gateway, authentication, and real-time order management to convert it into a complete full-stack application.
- **Research Paper Publication:** A research paper can be prepared and submitted based on the development of the Foodie Online Food Ordering Website, focusing on its responsive UI/UX design, food menu management interface, ordering process, and order-tracking functionality using HTML5, CSS3, and JavaScript.
- **Patent Filing/Grant:** The project may be considered for patent filing if an innovative and novel technical approach is developed, particularly around its food-ordering or order-tracking solution. A patent grant would be subject to novelty, inventive-step, and eligibility requirements.

THANK YOU !
